ABOUT INSPIRA PHARMACEUTICALS

Inspira Pharmaceuticals Limited is a UK-based company focused on the development and commercialisation of its proprietary IPX technology platform. Inspira has identified novel plant-based IPX formulations that have potential therapeutic applications for the treatment of respiratory diseases, including COVID-19. The Company's product candidates contain proteolytic enzymes that can effectively degrade numerous structures, ranging from the SARS-CoV-2 spike protein that drives viral infection, to biofilms associated with various lung conditions. Inspira's products are being formulated for pulmonary delivery with the aim of inhibiting SARS-CoV-2 replication in the lungs as well as treating and preventing other respiratory infections.
